PROFESSIONAL SUMMARY

Senior Data Migration Consultant and ETL & SQL Engineer with 7+ years of experience designing, developing, and optimising enterprise ETL workflows, data integration solutions, and data quality frameworks for large-scale data migration and business transformation programmes.

Strong expertise in SQL, including complex queries, CTEs, window functions, stored procedures, query optimisation, and data transformation. Proven experience building automated data validation frameworks, reporting solutions, and self-service data tools that improve data quality, operational efficiency, and business decision-making.

Experienced in data integration, data profiling, data cleansing, enterprise reporting, and large-scale data migration involving millions of records. Knowledge of data warehousing concepts, dimensional modelling, enterprise data governance principles, and master data management practices. Currently expanding expertise in Python, AWS, Apache Airflow, dbt, and Tableau.

TECHNICAL SKILLS

- SQL & Databases: SQL (Complex Queries, CTEs, Window Functions, Stored Procedures, Query Optimisation), SQL Server, PostgreSQL, DB2
- Data Engineering: ETL, ELT, Data Integration, Data Transformation, Data Warehousing Concepts, Data Modelling concepts
- ETL & Migration: IBM DataStage, Syniti ADM, Syniti ADMM, SAP Data Migration, Apache Airflow (Learning), dbt (Learning)
- Programming & Scripting: Python (Learning), UNIX Shell Scripting, COBOL, JCL
- Cloud: AWS Cloud Fundamentals (Amazon S3, AWS Glue, Amazon Athena, EC2, IAM)
- BI & Reporting: Tableau (Learning), Self-Service Reporting, Dashboard Development
- SAP Technologies: LTMC, LSMW, IDoc, LTMOM, SAP Business Partner, Material Master, Production Planning
- Data Quality: Data Quality Management, Pre/Post-Load Validation, Data Profiling, Data Cleansing, Reconciliation, Data Validation

WORK EXPERIENCE

Senior Data Migration Consultant - Syniti Mar 2022 – Present

BP - Energy Sector Mar 2025 – Present

- Led end-to-end data pipeline design and delivery of ETL pipelines for SAP Material master migration (SAP ERP to SAP S/4HANA), processing over 80,000+ material master records from data transformation through production load execution.

- Built an automated pre-load and post-load SQL validation and reporting framework to monitor record counts, data quality metrics, and pipeline failures across migration runs, accelerating business sign-off and enabling a controlled go-live.
- Developed complex SQL solutions using CTEs, window functions, stored procedures, and user-defined functions to derive, transform, and cleanse source data, improving data quality before migration.
- Developed self-service analytical reports, including duplicate analysis, positive list, and configuration comparison reports, enabling business users to perform independent data analysis and reducing reliance on engineering teams.

IKEA Jan 2024 – Feb 2025

- Developed and optimised SQL stored procedures supporting continuous integration of Business Partner data, processing over **60,000** records across **15+** related tables while improving pipeline throughput.
- Implemented automated field-level comparison logic across multiple related tables to classify records as load-ready or identify discrepancies, strengthening data quality controls.
- Built SQL data layers powering self-service dashboards for load readiness, field-level change tracking, and drill-down error analysis, enabling business users to independently monitor migration readiness.
- Developed post-load monitoring queries tracking processed, loaded, and failed records per pipeline execution, providing continuous visibility into migration health.
- Developed SQL functions, CTEs, and transformation logic to standardise and cleanse Business Partner data, ensuring consistency across all integration pipelines.

Corning Inc. Apr 2022 – Dec 2023

- Developed SQL-based data quality reports to identify data anomalies, including postcode, mobile number, email, duplicate bank account, and SWIFT/BIC validation issues, enabling timely business remediation.
- Owned end-to-end ADM solution development, including transformation logic, validation frameworks, and migration execution for Production Planning objects (BOMs, Routings, Work Centres, Batch Masters).
- Designed automated pre-load and post-load validation reports, tracking record counts, error rates, and migration success metrics across production migration cycles.
- Provided hyper-care support post-migration to diagnose and resolve data issues, ensuring smooth system transition.

ETL Developer (DataStage) - Infosys Nov 2019 – Feb 2022

Bank of America, Mar 2020 – Feb 2022

- Designed and developed end-to-end IBM DataStage ETL pipelines to migrate data from DB2 to a Teradata Data Warehouse, implementing extraction, transformation, and load processes while ensuring data integrity and pipeline performance.
- Developed SQL queries and transformation logic within DataStage workflows to extract, cleanse, validate, and transform data for enterprise data migration and reporting initiatives.
- Developed UNIX shell scripts to automate post-load notifications and generate summary reports comparing expected versus successfully loaded records, improving operational visibility and reducing manual monitoring.
- Scheduled, monitored, and managed ETL workflows using AutoSys, improving pipeline reliability and ensuring timely execution of batch processing jobs.
- Performed unit testing, user acceptance testing (UAT), and end-to-end validation of ETL pipelines to verify data accuracy, completeness, and successful migration before production deployment.

CONTINUOUS LEARNING

Actively expanding expertise in modern data engineering technologies:

- dbt – Data transformation, ELT pipelines, data modelling
- Apache Airflow – Workflow orchestration, pipeline scheduling, DAG development
- AWS – Amazon S3, AWS Glue, Amazon Athena, cloud data services
- Python – Data manipulation, automation, scripting
- Tableau – Dashboard development, data visualisation, self-service analytics
- AI Developer Tools – Claude Code, OpenAI Codex, AI-assisted software development, SQL optimisation

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science - Visvesvaraya Technological University

CERTIFICATIONS

- Certified Syniti ADM Developer – Syniti | Credential ID: 12585089
- Certified in Syniti Data Migration Methodology – Syniti
- Certified in Advanced Data Migration (ADMM) – Syniti | Credential ID: 15682601
- SQL (Advanced) Certificate – HackerRank | Credential ID: 9C763E8C321D

ADDITIONAL INFORMATION

- Right to Work: Full right to work in the UK. No visa sponsorship required.
- Interests: Data Engineering, ETL, Data Management, Data Warehousing, Data Analytics
